Submitted  
October 30, 2017

**Reporting Period:** October 21, 2017 – October 30, 2017

Team meetings held Mondays and Wednesdays 2:30p.m. – 3:30p.m.  
October 23, 25, 30

### **Tasks Performed**

1. Team Sprint Plan completed: user stories for administrator track were reviewed and updated.
2. Django project was started, models created for betting sheet and games played.
3. Some research was done into ESPN's API for possible incorporation into the project.
4. Views were considered for administrator; decided that simpler is better.

### **Anticipated Tasks**

1. Give administrator full access over betting sheet objects (weekly game details, etc.)
2. Add to models for users of betting pool; give administrator access to add/remove/update the users.
3. Test code as it is implemented.
4. User interface for the administrator will be created such that game information and player participation can be updated.
5. Functional software (administrator tasks) will be ready by the first sprint deadline.
6. Begin planning for sprint 2: Team Sprint Plan 2 is due Friday, November 3.

### **Outstanding Issues**

1. Outside classwork, homework, and other activities restricting the amount of time available for implementing our use cases into code.
2. Becoming fluent enough in Django to implement our tasks at hand is taking some time and patience.
